Summary

Full-stack software developer with experience delivering end-to-end web applications using Next.js, React, TypeScript, and Node.js. Strong foundation in backend development, database management (PostgreSQL, MongoDB, MySQL), and API-driven architectures. Proven ability to work across multiple projects, collaborate in agile teams, and build clean, scalable systems.

Skills

TypeScript, JavaScript, Python, Next.js, React, Node.js, FastAPI, PostgreSQL, PHP, MySQL, MongoDB, AWS, Vercel, Render, Cloudflare, Tailwind CSS, ShadCN, Daisy UI, Redux, Redis, React Query, Agile, Jira, Git, GitHub, REST APIs, Figma

Experience

Software Engineer Intern

May 2025 - Sep 2025

OctSpace PVT.LTD

- Developed and maintained full-stack application features using Next.js, TypeScript, Tailwind CSS, ShadCN, Node.js, and PostgreSQL to support core business workflows.
- Built and optimized REST APIs and database models, improving performance, reliability, and scalability.
- Collaborated in an Agile team on code reviews, sprint planning, and production deployments.

Freelance Full Stack Developer

Nov 2025-Working

Client Project | Cloud by Kyirmu | [Live](#)

- Built a full-stack café management and online food ordering system using Next.js, MongoDB and Tailwind CSS with Cloudinary integration for efficient media handling.
- Developed an advanced admin dashboard with real-time analytics for orders, revenue and inventory, including status-based tracking and profit/loss insights.
- Implemented secure authentication and verification using NextAuth, Nodemailer (email OTP) and Twilio (SMS OTP), ensuring reliable and scalable user security.

Project

Barber Management System

[Github Repo](#) | [Live](#)

Next.js, React, TypeScript, MongoDB, Tailwind CSS

Next.js web application for managing barber appointments, staff, and services

- Designed and developed an appointment scheduling system enabling customers to book, reschedule and cancel service appointments with real-time availability tracking from barbers.
- Implemented role-based access control with separate dashboards for administrators, barbers and customers, allowing barbers to manage their schedules and admins to oversee operations.
- Build notification workflows using email to send appointment reminders confirmations and cancellations, reducing no-shows and improving customer engagement.

Restaurant Management System (QR code base ordering system)

[Github Repo](#) | [Live](#)

React, MongoDB, Nodejs, Tailwind CSS

- Engineered full-stack restaurant management system with QR code base table ordering.
- Implemented role-based dashboards for admin, kitchen, waiter, and customer.
- Independently handled planning, development, and testing.

Education

BSc (Hons) Computer Science (First Class Honors)

2022 - 2025

Herald College Kathmandu

Naxal, Kathmandu

+2 Management

2020 - 2022

Nilkantha Secondary School

Dhading Besi, Dhading
